PREFACE

The information set forth in this publication is compiled and amended annually by the Financial Management Staff of the National Cancer Institute and is intended primarily for use by members of the Institute staff, the principal advisory groups to the Institute and others involved in the administration and management of the National Cancer Program. Questions regarding any of the information contained herein may be directed to the Financial Manager, National Cancer Institute, 9000 Rockville Pike, Bethesda, Maryland 20892.

YEAR 2000 GOALS AND OBJECTIVES

The National Cancer Institute established a goal of reducing cancer mortality by 50 percent by the year 2000. This optimistic endeavor is made quite achievable both because of the promise of today's scientific opportunities and the record of accomplishments of the past decade. This effort is primarily based on aggressive application of existing knowledge about cancer prevention, screening, early detection, and treatment, and on the application of future gains in knowledge in treatment and prevention regimens that can reasonably be expected over the next decade and a half.

In order to fulfill the goal of 50 percent mortality reduction by the year 2000, four main areas will continue to be pursued and emphasized—smoking prevention and cessation, dietary modification, early detection of cancer through effective screening, and widespread application of the latest achievements in basic research which allow new and effective treatment regimens.

The following depicts NCI areas to be emphasized and objectives necessary to achieve its year 2000 goal:

CONTROL AREA	BRIEF RATIONALE	YEAR 2000 OBJECTIVE
Prevention/ Smoking	The causal relationship between smoking and cancer has been scientifically established	— Reduce the percentage of adults who smoke from 34 percent (in 1983) to 15 percent or less.
		— Reduce the percentage of youths who smoke by age 20 from 36 percent (in 1983) to 15 percent or less.
Prevention/ Diet	Research indicates that high-fat and low-fiber consumption may increase the risk for various cancers. In 1983 NAS reviewed research on diet and cancer and recommended a reduction in fat; more recent studies led NCI to recommend an increase in fiber. Research is underway to verify the causal relationship and to test the impact on cancer incidence.	— Reduce average consumption of fat from 40 percent to 30 percent or less of total calories
		— Increase average consumption of fiber from 8 to 12 grams per day to 20 to 30 grams per day.
Screening/ Breast	The effectiveness of breast screening in reducing mortality has been scientifically established.	— Increase the percentage of women ages 50 to 70 who have annual physical breast exam and mammography from 45 percent for physical exam alone and 15 percent for mammography to 80 percent for each.
Screening/ Cervical	The effectiveness of cervical screening in reducing mortality has been scientifically established.	— Increase the percentage of women who have a Pap smear every 3 years to 90 percent from 79 percent (ages 20 to 39) and to 80 percent from 57 percent (ages 40 to 70).
Treatment/ Transfer of Research Results to Practice	NCI review of clinical trial and SEER data indicates that, for certain cancer sites, mortality in SEER is greater than mortality experienced in clinical trials.	— Increase adoption of state-of-the-art treatment, including improved treatment of micrometastases.

SIGNIFICANT INITIATIVES IN 1985

Progress in Acquired Immune Deficiency Syndrome (AIDS)

Current NCI activities in AIDS research have yielded promising results in clarifying the genesis of this immunological disease, as well as in approaching suitable, effective methods of control and treatment.

The possibility of new cases of transmission of HTLV-III, the virus found to be the cause of AIDS, through infected blood or blood products has been virtually eliminated. A simple blood screening test has been developed which can detect the presence of antibodies to HTLV-III, an indication that the donor has been exposed to the virus.

In the area of treatment, agents are currently being tested which have shown anti-HTLV activity, along with others which exhibit this anti-reverse transcriptase activity while being relatively free from dangerous side-effects. Currently, agents are being sought and tested for the possibility of restoring severely damaged or lost immune function.

NCI is currently working in conjunction with the National Institute of Allergy and Infectious Diseases (NIAID) to cooperatively attack the problem of AIDS. Efforts include acquisition and screening of new antiviral drugs, selection of new drugs for clinical trials, preclinical toxicology, formulation, and pharmacology of these promising agents, preparation of Investigational New Drug Applications for any promising anti-AIDS agents, joint clinical trials, and expansion of efforts to develop and test a safe and effective vaccine.

Cancer Prevention Awareness Program

Today we know that nearly 80 percent of cancers are related to environmental causes, many associated with personal behavior such as cigarette smoking and eating habits. However, a survey conducted by the NCI in June 1983 revealed that the public's view of cancer is confused; people are pessimistic about cancer risks and the potential for personal control over those risks.

In March 1984, NCI introduced the Cancer Prevention Awareness Program—a major NCI effort to increase public awareness of the possibilities for cancer prevention, presenting a challenge to the American people to learn what they can do every day to control their own risks.

The program theme, "Cancer Prevention: The News is Getting Better all the Time", encourages optimism. Messages emphasize personal control, explaining that every day individuals can take steps to control their own cancer risks. For example, don't smoke or use tobacco in any form; eat foods high in fiber and low in fat; and include fresh fruits, vegetables, and whole grain cereals in your daily diet.

The program is being implemented in two phases. Phase I relies primarily on mass-media efforts to create awareness of prevention messages and to encourage people to learn about cancer prevention from a free NCI booklet available by calling 1-800-4-CANCER. With Phase II of the program, which began in 1985, the emphasis shifted from the general public toward populations at greater than average risks, and in May, NCI launched a program for Black Americans. Efforts are also underway to reach Hispanics, Asian Americans, children and youth, and women.

The program also initiated a diet and nutrition education program in 1985. A free booklet "Diet, Nutrition and Cancer Prevention: A Guide to Food Choices", which provides many suggestions for more healthful eating habits, was published and distributed.

Outstanding Investigator Grant (OIG)

The Outstanding Investigator Grant is a new seven-year renewable grant which is intended to provide stable support to an investigator who has been conspicuously productive in cancer

PDQ Database Licensing

The International Cancer Information Center (ICIC), Office of International Affairs (OIA), NCI, serves as the focal point for the collection and dissemination of scientific data on all research related to cancer biology, etiology, prevention, and treatment. A major effort of the ICIC has been the development of a user friendly database on cancer treatment. This database, known as PDQ, is being utilized to speed the dissemination of information on progress in cancer treatment to practicing physicians throughout the world. In conjunction with the National Library of Medicine (NLM), NCI distributes PDQ through the MEDLARS system at over 2,800 medical libraries and to individual physicians who request personal PDQ codes.

In order to facilitate more widespread use of the PDQ database, the NCI also makes PDQ tapes available to commercial vendors for distribution to physicians. Three vendors, BRS/Saunders (COLLEAGUE) of New York, Mead Data Central

(MEDIS) of Dayton, Ohio, and TELMED, a firm based in Geneva, Switzerland, have signed licensing agreements with NCI. The NCI is actively seeking additional vendors to distribute PDQ to physicians worldwide. Interested parties should contact:

Supercomputer

The past decade has witnessed the advent of a "biological revolution"—gene cloning, rapid DNA sequencing, and the application of monoclonal antibodies in the detection and treatment of disease. This has led to a complex of data that, like the study of DNA previously, would seem to be impossible to fully analyze. With the rapid increase in computer technology, the use of supercomputers in biomedical research brings the solution to these extremely complex problems into the realm of reality. To meet this need, NCI has acquired a supercomputer to be housed at the Frederick Cancer Research Facility.

There are a number of urgent scientific problems that need the power of a supercomputer. These include: analysis of the growing data bases of nucleic acid and protein sequences; experimental design of modified genes and proteins; X-ray crystallography in the analysis of the structure of genes and proteins; and molecular modeling in terms of drug design, enzyme inhibitors and various permutations.

The application of supercomputer technology is bound to accelerate our knowledge of biological processes and of life itself—rapidly increasing our ability to prevent and treat cancer. The supercomputer is scheduled to be operational in April 1986.

NATIONAL CANCER PROGRAM NATIONAL CANCER INSTITUTE

DIRECTOR'S BIOGRAPHY

Vincent T. DeVita, Jr., M.D.

Vincent T. DeVita, Jr., M.D., has served as Director of the National Cancer Institute (NCI) since his Presidential appointment on July 9, 1980. Dr. DeVita joined NCI initially in 1963 as a clinical associate in the Laboratory of Chemical Pharmacology, leaving in 1965 to complete his advanced training in medicine at Yale—New Haven Medical Center.

He served NCI consecutively as a senior investigator in the Solid Tumor Service, Head of the Solid Tumor Service, Chief of the Medicine Branch, and Director of the Division of Cancer Treatment from 1974 until his appointment as NCI director. In addition, he has served concurrently as NCI Clinical Director since 1975.

Dr. DeVita earned his B.S. degree at the College of William and Mary in 1957. He was awarded his M.D. degree with distinction by The George Washington University School of Medicine in 1961. He was Associate Professor of Medicine from 1971 to 1975 and, since 1975, Professor of Medicine at The George Washington University School of Medicine.

In 1972, Dr. DeVita received the Albert and Mary Lasker Medical Research Award for his contribution to the cure of Hodgkin's disease. In 1980, he was awarded the Griffuel Prize by the French Association for the Development of Research on Cancer, again for his important contributions to cancer chemotherapy, particularly the development of multiple-drug therapy for Hodgkin's disease and diffuse histiocytic lymphoma.

He was awarded an honorary Doctor of Science degree from the College of William and Mary in 1982, the Alumni Achievement Award from The George Washington University, and an honorary Doctor of Science degree from Ohio State University in 1983, and an honorary Doctor of Science degree from The George Washington University School of Medicine in 1984. He was elected to the Institute of Medicine of the National Academy of Sciences and received

several awards in 1985. The awards are the Pierluigi Nervi Award in Italy, the American Cancer Society's Medal of Honor, and the Second Annual Award from the American Italian Foundation for Cancer Research.

He is past-president and board member of the American Society of Clinical Oncology, has served on the board of directors of the American Association for Cancer Research and as a member of the panel of consultants to the International Union Against Cancer.

Dr. DeVita serves on the editorial boards of numerous scientific journals and is author and coauthor of more than 300 scientific articles. In addition, he is one of the editors and authors of *Cancer: Principles and Practice of Oncology*, a comprehensive textbook in the field of cancer medicine.

All Other & Unspecified Sites	35,800	18,300	17,500	31,500	15,700	15,800

NOTE: The estimates of new cancer cases are offered as a rough guide and should not be regarded as definitive. Especially note that year-to-year changes may only represent improvements in the basic data.

¹ Carcinoma in situ and non-melanoma skin cancers not included in totals. Carcinoma in situ of the uterine cervix accounts for over 45,000 new cases annually and carcinoma in situ of the female breast accounts for over 5,000 new cases annually. Non-melanoma skin cancer accounts for about 400,000 new cases annually.

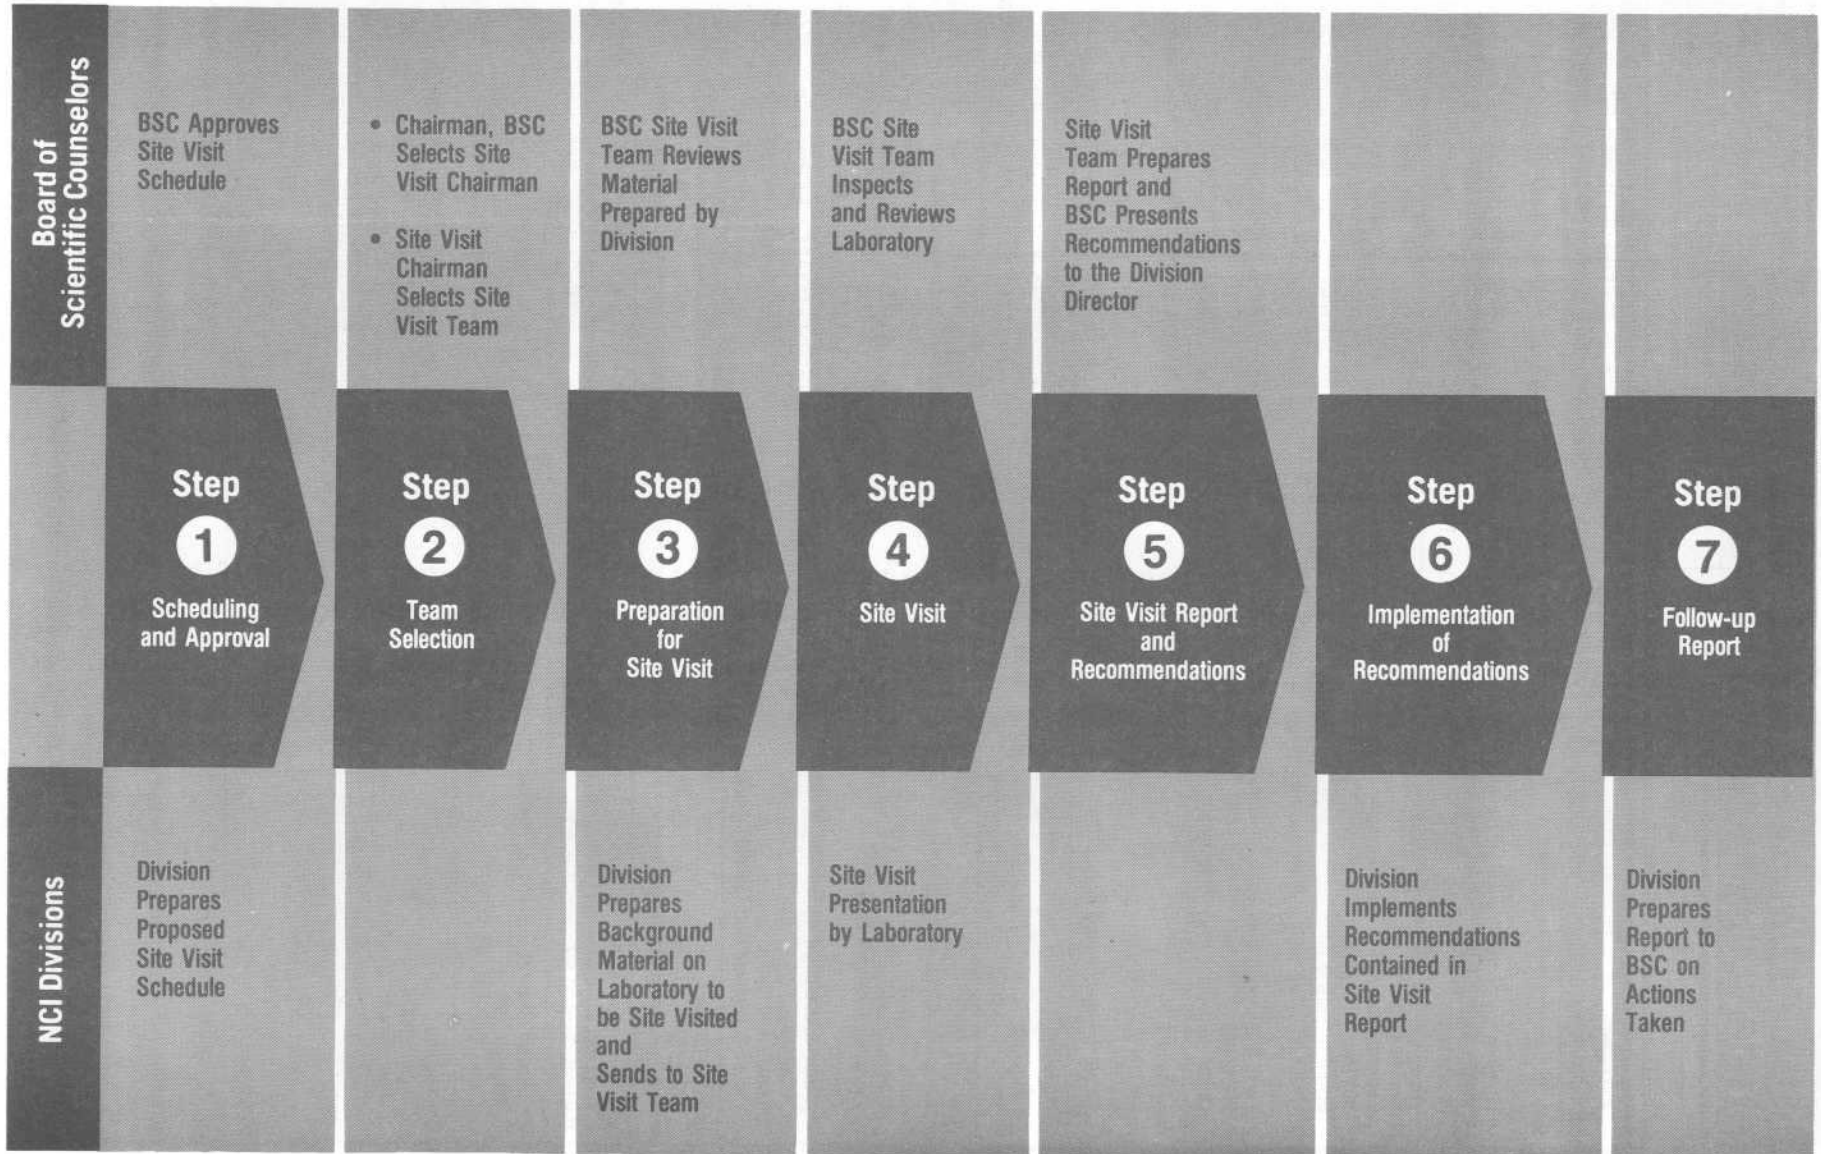

² Melanoma only.

³ Invasive cancer only.

⁴ Melanoma 5,500; other skin 1,900.

INCIDENCE ESTIMATES ARE BASED ON RATES FROM NCI SEER PROGRAM 1977-1981.

NCI INTRAMURAL REVIEW PROCESS

RESEARCH POSITIONS AT THE NATIONAL CANCER INSTITUTE ¹

The National Cancer Institute recognizes that one of the most valuable resources to be drawn upon in the fight against cancer is the wealth of scientific talent available in the U.S. and around the world. In an effort to attract and maintain the highest quality scientific staff, two personnel systems are used: the U.S. Civil Service System and the PHS Commissioned Corps. In addition, the Staff Fellowship Program and the NIH Visiting Program have been designed to meet special needs. Other special programs are available for those who qualify.

POSITION	ELIGIBILITY	ANNUAL SALARY	MECHANISM OF ENTRY
I. CIVIL SERVICE			
A. Civil Service (tenured)	Appropriate advanced education, experience and knowledge needed by NCI to conduct its programs.	Minimum starting: Ph.D.—\$37,599 Physicians—\$50,822 Maximum: \$68,700	Office of Personnel Management, Contact Director or Laboratory Chief in area of interest or the NCI Personnel Office.
II. SPECIAL APPOINTMENT OF EXPERTS AND CONSULTANTS			
A. Special Appointment of Experts and Consultants (non-tenured appointment which can be extended up to 4 years).	Applicants shall possess outstanding experience and ability as to justify recognition as authorities in their particular fields of activity.	Equivalent to the salary range of GS-13 through GS-18. Maximum: \$68,700	Recommendation by Division Directors. Final approval rests with the Director, NCI.
III. MEDICAL STAFF FELLOWS			
A. Medical Staff Fellows	Appointment for 2 or 3 years with an additional 1-year extension for an initial 2-year appointment. Graduate of accredited medical or osteopathic school and completion of internship. Completion of 2 or 3 years of clinical training beyond the M.D. degree and demonstrated outstanding ability to conduct successfully, preestablished programs in both clinical and laboratory research.	\$30,000-\$34,000	Apply to the Clinical and Professional Education Section, Clinical Center, National Institutes of Health 20892.
B. Medical Staff Fellows in Pharmacology (PRAT Fellows). For physicians committed to research careers in pharmacological sciences, or clinical pharmacology.	Appointment for 2 or 3 years with an additional 1-year extension for an initial 2-year appointment. Graduate of accredited medical or osteopathic school and completion of internship. Completion of 2 or 3 years of clinical training beyond the M.D. degree and demonstrated outstanding ability to conduct successfully, preestablished programs in both clinical and laboratory research.	\$30,000-\$34,000	Apply to the Clinical and Professional Education Section, Clinical Center, National Institutes of Health 20892.
IV. VISITING PROGRAM (limited tenure)²			
A. Visiting Fellow (maximum 3 years)	1-3 years postdoctoral experience or training	Entrance stipend \$16,000-\$18,000	Contact Director or Laboratory Chief in area of interest.
B. Visiting Associates (1 year with renewals to end of project)	3+ years postdoctoral experience or training with appropriate knowledge needed by NCI.	\$21,804-\$44,105	Contact Director or Laboratory Chief in area of interest.
C. Visiting Scientist (duration of project)	6+ years postdoctoral experience with appropriate unusual experience and knowledge needed.	\$31,619-\$68,700	Contact Director or Laboratory Chief in area of interest.

¹Does not necessarily indicate that positions are currently available at the National Cancer Institute.

²Under most circumstances, the various visiting programs are limited to non-citizens.

V. STAFF FELLOWSHIPS

POSITION	ELIGIBILITY	ANNUAL SALARY	MECHANISM OF ENTRY
A. Staff Fellowship	Physician or other doctoral degree equivalent awarded within last 5 years, U.S. citizen or non-citizen eligible for naturalization within 4 years. Maximum seven-year appointment.	Staff Fellows Physicians \$20,688-\$34,312 Other Doctorates \$17,000-\$36,889 Senior Staff Fellows Physicians \$23,439-\$47,788 Other Doctorates \$20,688-\$41,358	Contact Director or Laboratory Chief in area of interest or the NCI Personnel Office.

VI. CIVIL SERVICE SUMMER EMPLOYMENT PROGRAMS

A. Summer Clerical Program	Must be 18 years of age or older (16 if high school graduate).	GS-1 through GS-4 Grade is based on education and/or experience.	Apply to NIH on or before March 15.
B. Summer Undergraduate Program	Students majoring in biological and/or physical sciences or related field, or applicants with appropriate experience.	GS-1 through GS-4 Grade is based on education and/or experience.	Apply to NIH by March 15.
C. Summer Graduate Program	College graduate, graduate student, planning to attend graduate school, faculty member, or equivalent experience and/or education.	GS-5 through GS-12 For some occupations superior scholastic work may qualify for a higher grade level.	Apply to NIH by March 15.
D. Summer Employment for Needy Youth	Educationally and economically disadvantaged youths in their formative years (must have reached 16th birthday).	Federal minimum wage.	Register with the local office of the State Employment service and apply to NIH.
E. Stay-in-School Program	Substantially full-time or full-time student at least 16 years of age who needs earnings from employment to continue in school.	Salary is commensurate with duties assigned and student's education and/or experience.	Apply to NIH. No deadline required for applying. However, no new appointments are made between May 1 to August 30.
F. The Federal Junior Fellowship Program	Graduating high school senior in a public or private school in the Metro. Wash., D.C. area. Must be in upper 10% of graduating class, have applied for admission to an accredited college or university and need financial assistance to attend school.	GS-1 through GS-4	Nominations are submitted directly to the Office of Personnel Management by high school principals or counselors.

VII. SPECIAL PROGRAMS

A. Guest researcher sponsored by organization other than NIH, PHS.	Determined by sponsoring organization.	Established by sponsoring organization.	Contact Director or Laboratory Chief in area of interest; also apply to sponsoring agency, e.g., American Cancer Society, Eleanor Roosevelt Cancer Foundation, Leukemia Society of America, Inc., etc.
B. COSTEP Program (operates year-round) Maximum 120 days per 12-month period.	U.S. Citizen. Must have completed one year of study in a medical, dental or veterinary school; or a minimum of two years of baccalaureate program in a health-related field such as engineering, nursing, pharmacy, etc. May be enrolled in a master's or doctoral program in a health-related field (designated by the Assistant Secretary for Health). Physical requirements of PHS Commissioned Corps. Plans to return to college.	Pay and allowance of a Commissioned Officer, Junior Asst. Grade.	Apply to PHS Commissioned Corps, COSTEP SECTION, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20852.
C. Fogarty International Scholars In Residence Program.	International reputation, productivity, demonstrated ability in biomedical field.	\$50,000 for 10 months.	Recommendation to Fogarty Center by Institute Director or Scientist. Contact Director in area of interest.

VIII. OTHER TRAINING PROGRAMS

POSITION	ELIGIBILITY	ANNUAL SALARY	MECHANISMS OF ENTRY
A. Cancer Control Science Associates (Three-year non-tenured Civil Service Position)	1) M.D./D.O., or accredited doctoral degree in an allied or public health profession, biomedical behavioral, or social science, or equivalent; 2) academic professional excellence supported by official transcripts; and four letters of reference; and 3) United States citizenship or meet one of the provisions which allow for the hiring of non-U.S. citizens. Information regarding the hiring of non-citizens may be obtained by calling the NCI Personnel Office.	First year for an M.D./D.O. or Ph.D. — \$31,044 or \$26,381 per annum respectively.	Program Coordinator, CCSAP NIH/NCI/DCPC/CCAB, Blair Building Room 4A01 Bethesda, Maryland 20892.
B. Biotechnology Fellow	Physicians with little or no experience or training in fundamental research, but with an interest in biotechnology including its application to prevention and new treatment and diagnostic techniques, would be eligible. Ph. D. scientists with little or no experience or training in clinically related programs, but with an interest in clinical applications of fundamental research methodology related to biotechnology would also be eligible. Typically, these candidates will have less than three years post-doctoral experience. The Biotechnology Training Program is established for United States citizens, or resident aliens who will be eligible for U.S. citizenship within four years.	First year: Ph.D. — \$22,500 to \$28,000 Physicians — \$26,000 to \$32,000	Contact Division Director or Laboratory Chief in area of interest.
C. Nurse Trainee	Applications will be accepted from graduates of NLN accredited baccalaureate nursing programs. Each candidate must submit academic transcripts demonstrating a minimum of a "B" average in undergraduate work, three references regarding their academic and clinical capability, a letter describing their interest in the program, and a Personal Qualification Statement, SF-171. This program is also available to all new graduate applicants to the Cancer Nursing Service; some may not be aware of the program prior to their contact with Clinical Center.	Stipends for the program will be \$1,300 per month	Contact the Division of Cancer Treatment.

SPECIAL TRAINING MECHANISMS: FISCAL YEAR 1985

Biotechnology Training Program

Why Needed:

- To provide training in fundamental sciences and clinical disciplines for physicians and Ph.D. scientists.
- To enhance cancer clinical programs through the rapid transfer and application of new techniques and fundamental knowledge leading to state-of-the-art prevention, diagnosis and treatment of cancer.
- To maintain a significant level of support for training in those disciplines related to biotechnology.

Program Provisions:

- Training assignments in modern biotechnology will emphasize the application of recombinant DNA and hybridoma technology to cancer clinical programs; emphasis also is in the areas of nutrition, clinical pharmacology, viral oncology, and biochemical and clinical epidemiology as clinical disciplines.

- The program is supervised by the Senior Scientific Coordinating Committee (the Executive Committee is currently serving in this role).
- Each candidate will have a training plan. Candidates and training plans will be approved by the Division Director and SSCC.
- Fellowships are from six months to two years, with the potential for an extension of up to three years.
- Fellowships are not subject to employment ceilings and there are no service/payback provisions.
- The program is limited to citizens or resident aliens eligible for citizenship.
- Candidates may apply to the NCI laboratory or branch that offers a program that best meets their training needs.

Status: It is expected that there will be six fellowships awarded by the first part of FY 1986.

Cancer Control Science Associates Program

Why Needed:

- To increase the number of scientists highly qualified to conduct cancer prevention and control intervention research in order to fully realize the potential for major reductions in cancer rates. This in keeping with NCI's year 2000 goal.

Program Provisions:

- Allows for doctoral level scientists from a variety of academic disciplines to be exposed to a number of educational experiences in cancer prevention and control.
- Associates spend the first three months of their three-year program in an academic course that covers all aspects of cancer pre-

vention and control. For the next 21 months participants are assigned to one of the Division's operational branches where they engage in specific research projects and also receive exposure to the daily management and administration of federal research programs. For the last 12 months, Associates are assigned to a field research project at either a cancer center, major NCI research grantee/contractor, or a public health department.

- Interested candidates may apply to Ms. Nancy Gardner, Division of Cancer Prevention and Control.

Status: It is expected that a total of 15 associates will be recruited per year.

Cancer Nurse Training Program

Why Needed:

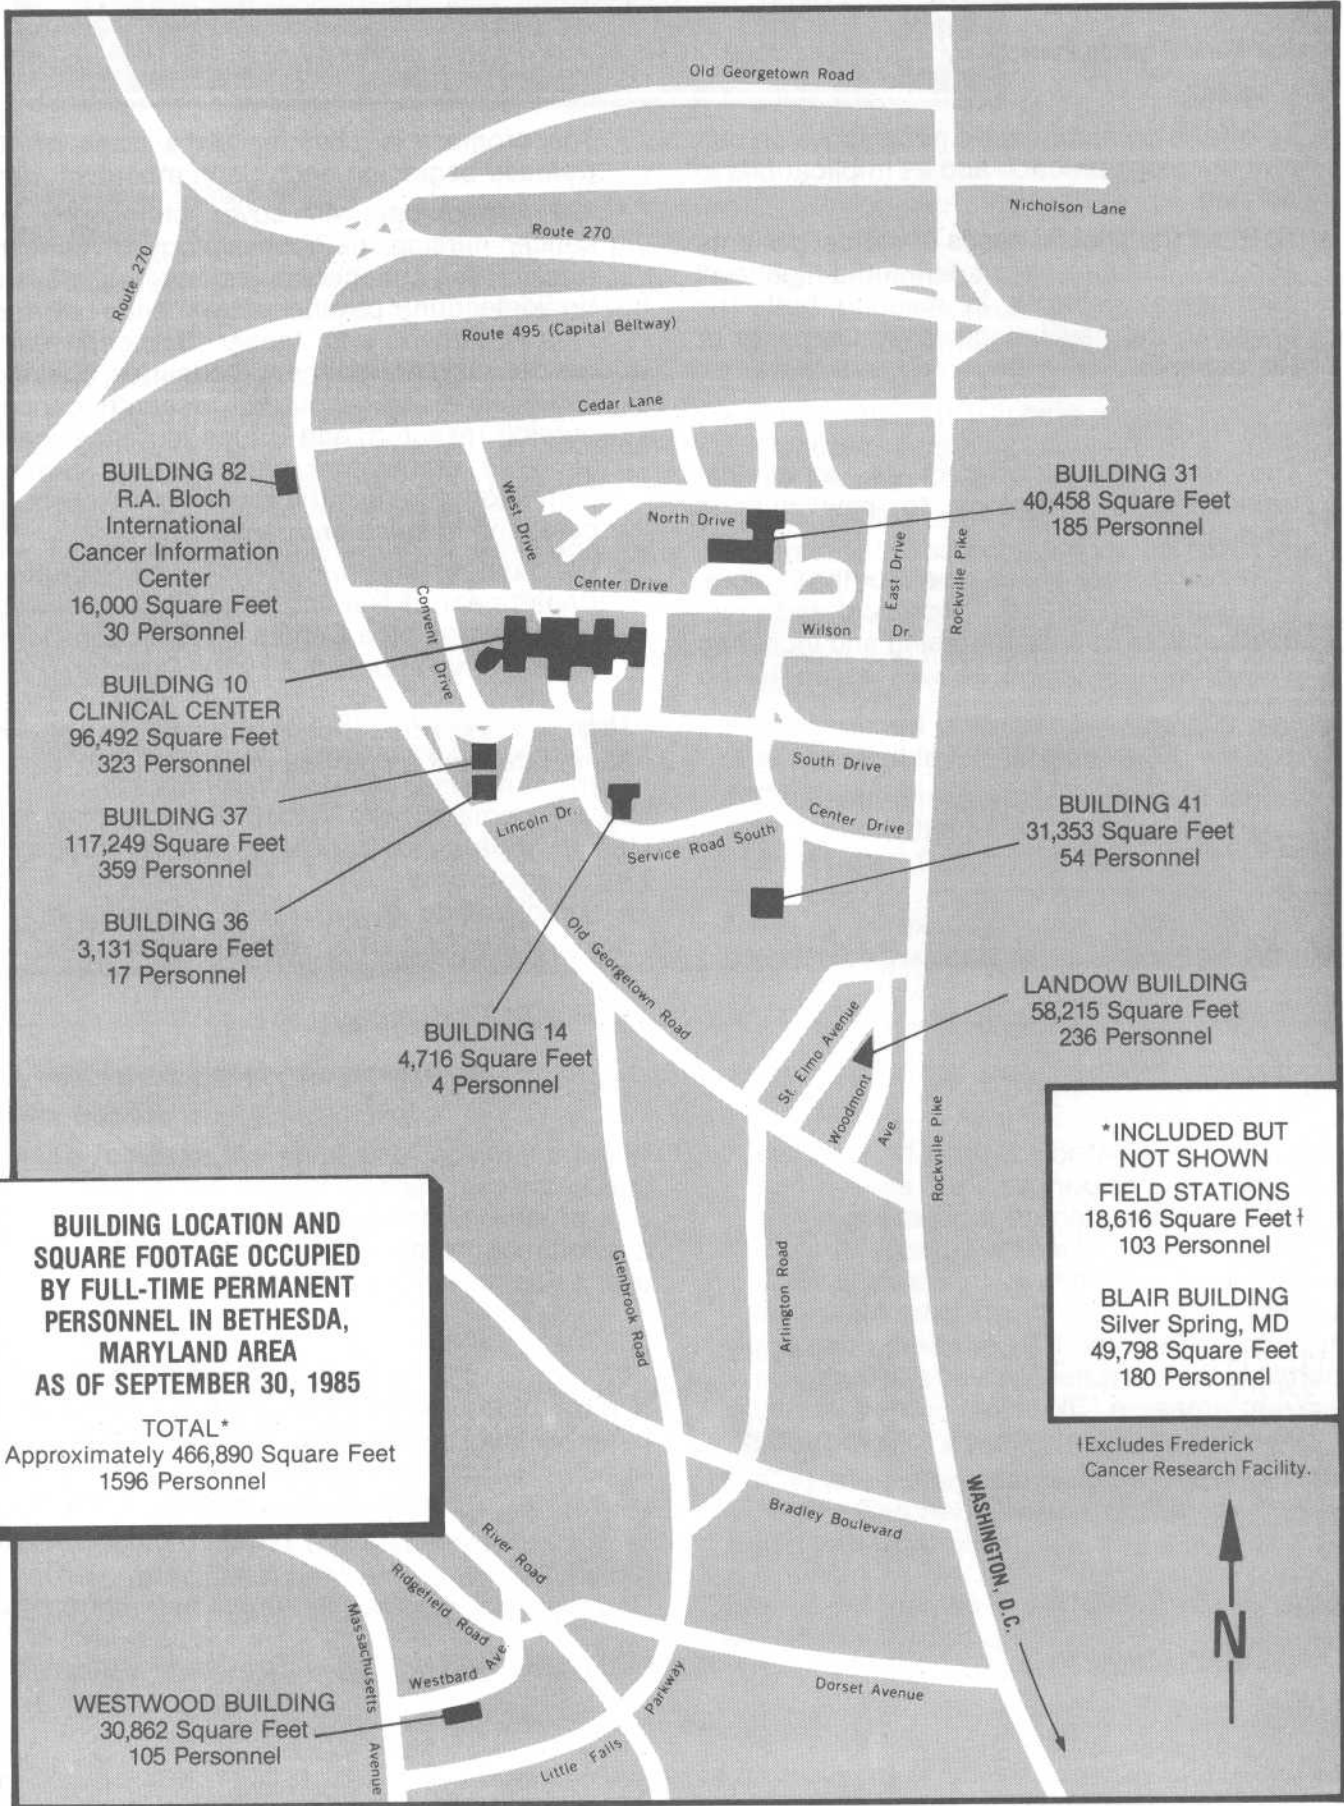

- To offer a comprehensive perspective on current oncology practice and its implications in nursing.
- To meet the special needs of cancer patients and their families which demand a high level of nursing practices in meeting both the physical and psychological requirements of the patients.

Program Provisions:

- The program is offered as a clinical traineeship in oncology to new nursing graduates.
- Traineeships are six to nine months in duration emphasizing both theoretical and practical aspects of cancer nursing and including classroom instruction as well as on-the-job training.

- The program is planning on a class of 10 trainees beginning each September/October.
- The curriculum will cover philosophy of cancer nursing, pathophysiology of cancer, epidemiology, diagnosis and staging, prevention/detection, psychosocial needs of the cancer patient and family, the child with cancer, current treatment modalities, specific cancers/major sites/current research, cancer nursing research, and issues in cancer care such as ambulatory care, use of current technology, aging, ethical dilemmas, costs of care, and hospice program.
- Candidates may apply to the Nurse Recruiter, Department of Nursing and will be reviewed and selected by a Candidate Selection Committee. Final approval is by the Director, DCT.

Status: It is expected that for the first year, seven candidates will be participating.

CANCER PREVENTION AND CONTROL OBLIGATIONS BY MECHANISM – FISCAL YEARS 1976-1985

REIMBURSEMENT TO NIH MANAGEMENT FUND – FISCAL YEAR 1985

TOTAL NIH SERVICES
\$231,773,000

- CLINICAL CENTER**
- Employee Health Services
 - Service Functions
 - Social Work
 - Professional Services
 - Consultative Services
 - Admissions and Follow-up
 - Anesthesiology
 - Diagnostic X-Ray
 - Clinical Pathology
 - Blood Bank
 - Rehabilitation Service
 - Pharmacy Service
 - Medical Records
 - TV Engineering
 - Nursing Service
 - Patient Nutrition Service
 - Environmental Sanitation Control
 - Laundry
 - Radiation Safety

- STANDARD LEVEL USER CHARGES (SLUC)**
- Building usage including utilities
 - Major renovations
 - Guard services for rental buildings

DISTRIBUTION OF NCI SERVICES
\$56,351,000

DIVISION OF COMPUTER RESEARCH AND TECHNOLOGY

Research & Development Program in which concepts & methods of computer science are applied to biomedical problems (In addition, services are rendered to the NIH community on a fee-for-service basis.)

DIVISION OF RESEARCH GRANTS

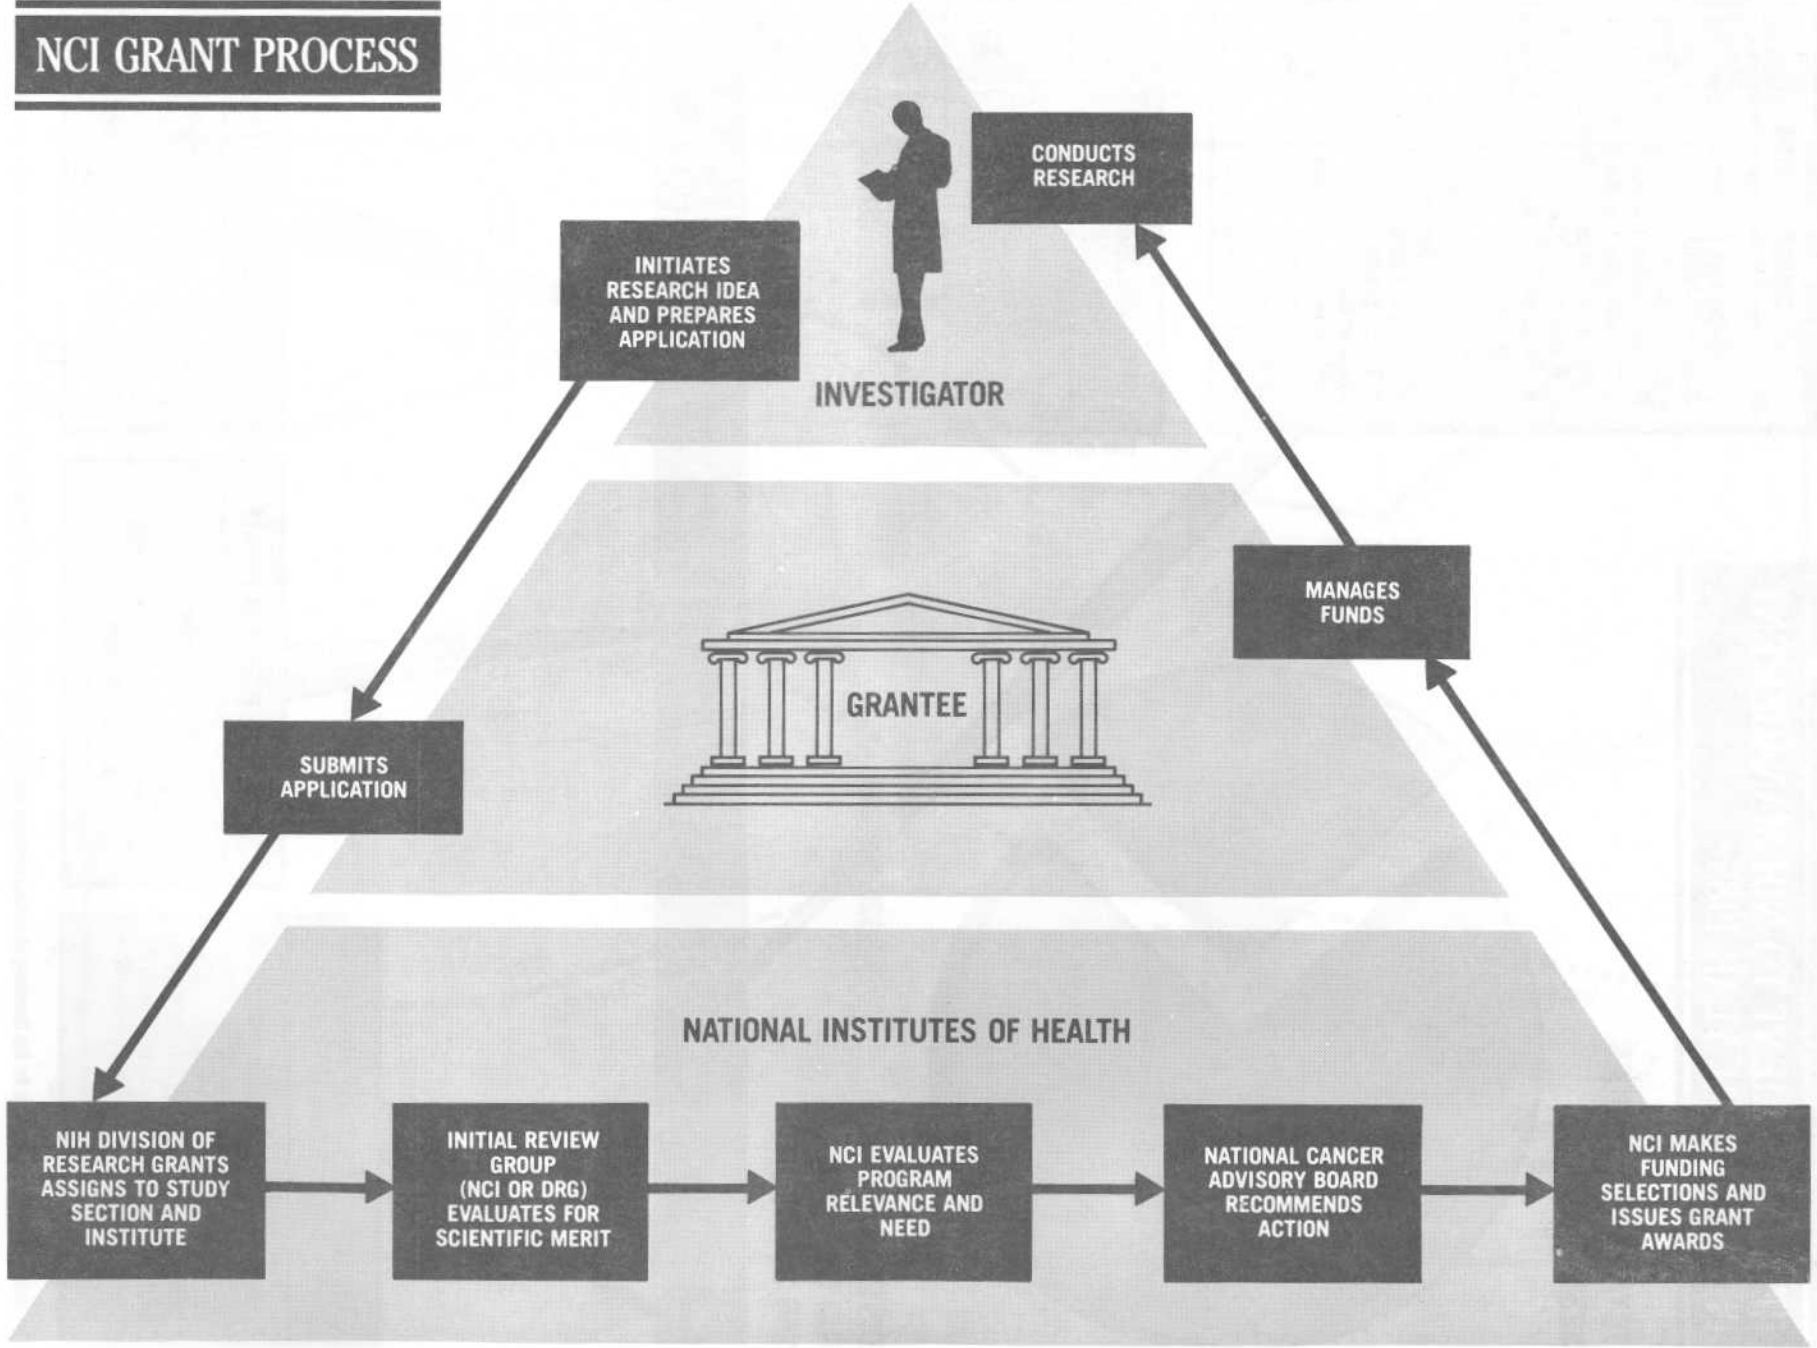

- Initial Scientific Review of Applications
- Assignment of Research Grant Applications Among Institutes

OTHER RESEARCH SERVICES

- Division of Administrative Services
- Division of Engineering Services
- Division of Safety
- Division of Research Services

The Management Fund provides for the financing of certain common supporting research services and administrative activities which are required in the operations of NIH.

NCI GRANT PROCESS

NCI REQUEST FOR APPLICATION (RFA): THE PROCESS

MAJOR EVENT	TIME ELAPSED (MONTHS)	DIVISION	OFFICE OF THE DIRECTOR, NCI/ DIVISION OF EXTRAMURAL ACTIVITIES	BOARD OF SCIENTIFIC COUNSELORS	NATIONAL CANCER ADVISORY BOARD	DIVISION OF RESEARCH GRANTS (DRG)/ OFFICE OF EXTRAMURAL RESEARCH AND TRAINING (OERT)	APPLICANT
PREPARATION AND RELEASE	1	• Presentation of Idea	• Proper Funding Mechanism Sought • Approval of Concept by Executive Committee				
	2			• Concept Review Approval			
	3	• Develop RFA					
	4		• Review/Clearance of RFA Proposal			• Clearance by DRG, NIH • Acceptance by OERT, NIH	
	5					• Publication Scheduled by OERT, NIH • Published in <i>NIH Guide To Grants and Contracts</i>	• Prepare Application — Letter of Intent may be Required
REVIEW AND AWARD	8					• Receipt of Applications by DRG	
	13		• Initial Review DEA, NCI				
	14						
	15				• Review		
	16		• Funding Decisions				
	17						• Award

NCI CONTRACT AWARD PROCESS – UNDER CANCER ACT OF 1971

NOTE: SIMULTANEOUS ACTIVITIES BY MORE THAN ONE ORGANIZATION INDICATE COOPERATIVE EFFORTS

DISTRIBUTION OF THE GRANT DOLLAR – FISCAL YEAR 1985

(DOLLARS IN THOUSANDS)

TOTAL GRANT OBLIGATIONS: \$746,062

MINORITY-FOCUSED PROGRAMS

Comprehensive Minority Biomedical Program (CMBP):

1. Promotes broadened participation by minorities in cancer-related research training.
2. Contributes to the support of NCI and clinical cooperative research groups to better enable NCI's research to reach and support minority populations that are particularly susceptible to cancer.
3. Provides additional support to NCI-funded investigators who wish to engage minority investigators in their research.
4. Encourages participation in annual meetings of the American Association for Cancer Research by providing travel support for minority scientists who are engaged in cancer research or who have training that could lead to contributions in this field.

Cancer Control Intervention Research Activities:

Due to major differentials which exist in cancer incidence, mortality and survival between minority populations and non-minority populations, an intervention research program has been established. Current program initiatives include:

1. Smoking prevention and cessation programs to identify and correct the causes of avoidable deaths from cancer in Black populations.
2. Establishment of a Research Network for Black Populations has been formed to address important scientific and social issues relevant to this population.
3. Data collection efforts on cancer in Hispanics has been increased.
4. Development of a Hispanic community liaison function is being addressed in order to reach this population.

TOTAL (1938-1986).....\$15,436,730,283

TRANSITION QUARTER (“TQ”)—July 1, 1976 through September 30, 1976-The Interim Period in the changing of the Federal Fiscal Year from July 1 through June 30, to October 1 through September 30.

¹Includes \$18,163,000 for training funds provided by Continuing Resolution.

²Includes \$3,201,000 for training funds provided by Continuing Resolution.

³Includes \$20,129,000 for training funds provided by Continuing Resolution.

⁴1980 appropriation authorized under a Continuing Resolution.

⁵Reflects 1981 rescission of \$11,975,000.

⁶Amount included in Continuing Resolution. Includes \$47,988,000 transferred to the National Institute of Environmental Health Sciences for the National Toxicology Program.

⁷Appropriated under Continuing Resolution and Supplemental Appropriation Bill.

⁸Includes \$23,861,000 for training funds provided by a Continuing Resolution and \$4,278,000 in a Supplemental Appropriation Bill.
